Task overview

The task has 40 rounds. **In each round, you have to choose between two lotteries with different prizes and odds.**

3

The task has 40 rounds. In each round, you have to choose between two lotteries with different prizes and odds.

We will not tell you the exact odds of each lottery. **Instead, you can try out the lotteries before deciding which one you want to play.**

4

The task has 40 rounds. In each round, you have to choose between two lotteries with different prizes and odds.

We will not tell you the exact odds of each lottery. **Instead, you can try out the lotteries before deciding which one you want to play.**

After enough tries, play the lottery you prefer. **The prize will be your bonus.**

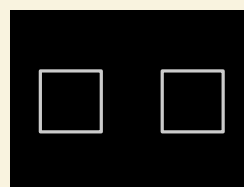

5

How to try out and play a lottery

Round 1/40

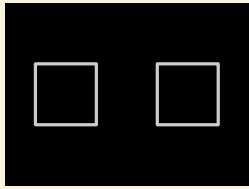

First, the number of the current round is displayed.

7

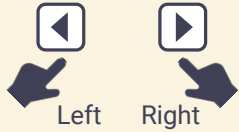

Next, two squares appear. Each square represents a lottery.

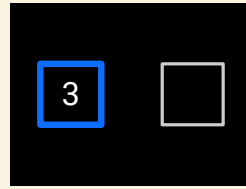

8

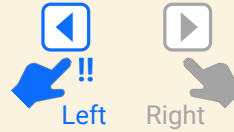

To try out the left lottery, press the **left arrow** key.
To try out the right lottery, press the **right arrow** key.

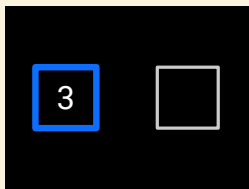

9

When you try out a lottery, you will see the prize that you would have won if you had played the lottery.

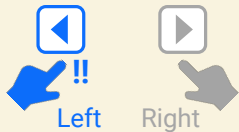

10

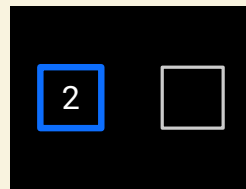

When you try out a lottery, you will see the prize that you would have won if you had played the lottery.

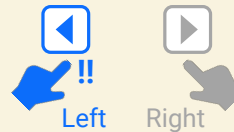

In the example, you are trying out the left lottery, and you would have won 3 points.

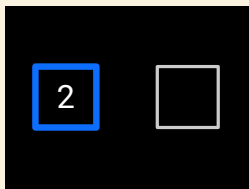

11

Playing the same lottery again may result in a different prize. In this case 2 points.

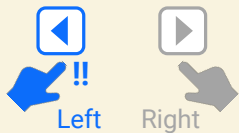

12

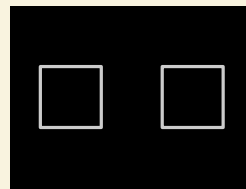

Playing the same lottery again may result in a different prize. In this case 2 points.

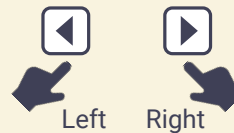

So, **a lottery will not necessarily show the same points every time you try.**

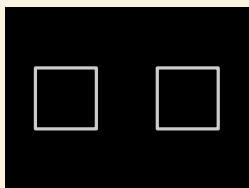

13

Try out the lotteries as many times as you like until you decide which one you want to play.

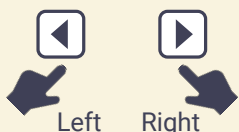

14

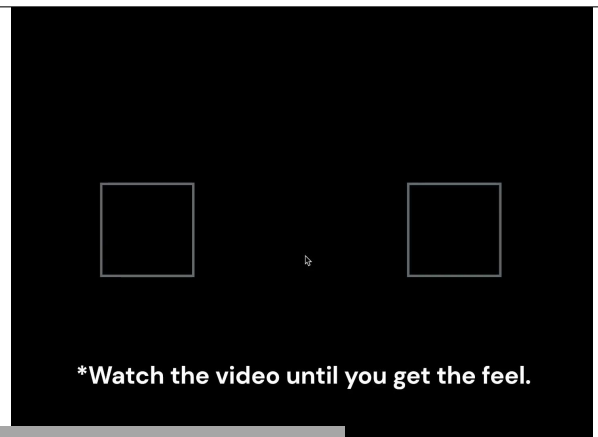

Try out the lotteries as many times as you like until you decide which one you want to play.

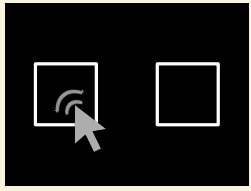

To see the process of trying out the lotteries, watch the video on the next page.

15

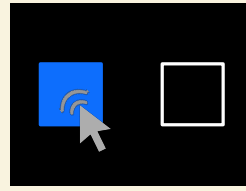

16

Once you have decided which lottery you want to play, stop pressing the left and right arrow keys and click on the lottery you want to play.

*You can also click with the touchpad.

17

The selected lottery will turn blue.

You will not see the prize for the lottery you have played.

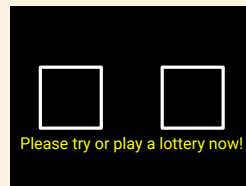

To see the process of playing a lottery, watch the video on the next page.

18

*Watch the video until you get the feel.

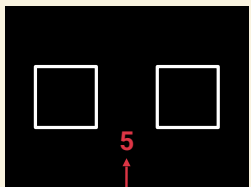

19

Please try or play a lottery within 3 seconds.

If you do not respond within 3 seconds, a message will prompt you to respond.

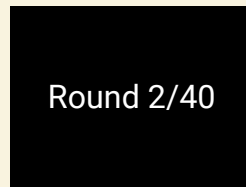

20

If you do not respond within 15 seconds, you will be considered to have dropped out of the task and will not receive any reward.

A timer will appear for the last 5 seconds.

21

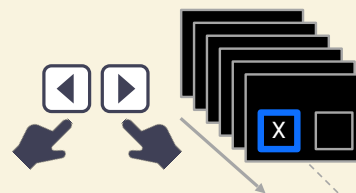

Once you have played a lottery (= made a final choice), the next round begins.

22

Let's recap the flow of a round and do a comprehension check.

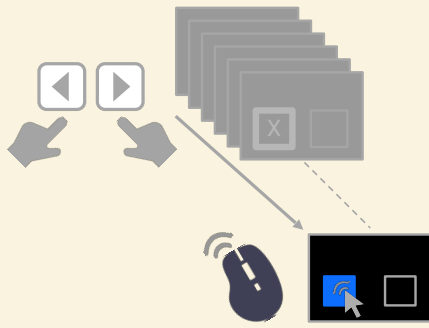

Flow of a round

Try out the lotteries until you decide which one you want to play.

24

Flow of a round

Try out the lotteries until you decide which one you want to play.

When you have tried out the lotteries enough, click on the lottery to play.

25

Bonus

At the end of the study, 5 of your 40 choices will be drawn, and these lotteries will be played out.

1 point is converted into 3 pence. This will be added to the base reward.

**You never know which rounds will be drawn.
So, take all your decisions seriously.**

26

If you drop out of the task...

You will not receive any reward.

Reloading or refreshing the tab/window is also considered a drop-out.

27

Was everything clear?

Answer the comprehension questions below.

You can try the questions twice. If you fail twice, you will not be allowed to start the task.

You can read the slides again if you are not sure.
